Projects

Tasker – Task Management Application

2026

- Built a full-stack task management application with Go backend and React/TypeScript frontend in a Turborepo monorepo.
- Designed RESTFUL API with categories, todos, and comments modules using layered architecture (handler, service, repository).
- Implemented background job processing and cron-based scheduling for automated task workflows.
- Integrated PostgreSQL for persistence, Redis for caching, and S3-compatible object storage for file handling.
- Tech stack: Go, ReactJs, PostgreSQL, Redis

Github Repository Link: github.com/thecharydev/Tasker

GarageMitra

2026

- Developed a garage management system for auto repair shops and mechanics
- Built job card management system to track vehicle service requests.
- Implemented vehicle registration and management module with customer association and service history.
- Created billing system with invoice generation, editing capabilities.
- Tech stack: Laravel PHP, MySQL, NextJS
